

Sriram Rajendran

Senior Platform & DevOps Engineer · Cloud / IaC · Identity, Deployment & SRE

Issaquah, WA · srindsub@gmail.com · (623) 999-5550 · linkedin.com/in/witsriram · github.com/witsriram · witsriram.com

PROFESSIONAL SUMMARY

Senior Platform & Cloud engineer with **16+ years** designing, automating, and operating large-scale cloud infrastructure. Currently engineering **deployment and identity** for a global **Azure Commerce platform** — diagnosing and retrofitting **EV2** rollouts, **Key Vault / certificate**, and **cross-tenant RBAC** flows across **sovereign clouds with zero portal access**. Creator of **D-Engine**, a proprietary **multi-cloud Infrastructure-as-Code** abstraction adopted across Intel, AkzoNobel, Amex GBT, and Capital One. Deep, hands-on **Azure** and **AWS** with **Terraform**-driven immutable provisioning; orchestrated **250+ bare-metal Kubernetes sites** at telecom scale and led **SRE** for Microsoft MFA against strict SLAs. Multi-cloud abstraction expertise transferable to **Google Cloud (GKE, BigQuery)**.

SIGNATURE ACHIEVEMENTS

- ▶ **Debugged the undebuggable** — root-caused EV2 multi-region RBAC/identity failures with no portal or JIT access.
- ▶ **Operated at scale** — 250+ bare-metal Kubernetes sites; SLA-backed SRE for Microsoft MFA.
- ▶ **Built proprietary IP** — D-Engine multi-cloud IaC reused across 4+ enterprise clients.
- ▶ **Reach** — 300+ production sites on Nginx; 80+ servers under D-Engine CI/CD.

CORE TECHNICAL SKILLS

Infrastructure as Code	Terraform (primary), D-Engine (multi-cloud IaC IP), Helm, modular/immutable IaC, declarative YAML, Ansible, Chef
Cloud Platforms	Azure (EV2, AI Foundry, Arc, Front Door/CDN, AKS, Functions, Key Vault), AWS (EC2, S3, Route 53, ELB, IAM, CloudFormation); GCP (GKE, BigQuery) — transferable
Identity & Security	Entra ID, Managed Identity / UAMI, Service Principals, cross-tenant auth, RBAC (data & control plane), Key Vault, certificates
Containers / Orchestration	Kubernetes (CRDs, Operators, RBAC), AKS, OpenStack-Helm, Airship, Ceph, Calico, Docker
CI/CD & DevOps Code	GitHub, GitHub Actions, GitHub Copilot, Azure DevOps (Repos/Pipelines/Artifacts), Jenkins (Groovy), ArgoCD, Pipeline-as-Code
Observability	Datadog, Splunk, Nagios, Kibana, ThousandEyes, Geneva/MDS dashboards; adopting Dynatrace, Grafana, Power BI
Languages	Go, Python, PowerShell, Bash, Ruby, C#
AI / Platform	LLMOps, Azure AI Foundry, GPT-4, RAG, ChromaDB, LangChain, Semantic Kernel, KAITO

PROFESSIONAL EXPERIENCE

LTIMindtree Limited — Senior Platform & DevOps Engineer (Client: Microsoft)

Jan 2026 – Present

Azure Commerce Platform — Deployment & Identity Engineering

- Diagnose and retrofit **EV2 (Express v2)** deployments for a global Azure Commerce platform **entirely without portal or JIT access** across **sovereign clouds** — reasoning from service models, rollout specs, resolved bindings, and deployment logs.
- Root-caused a multi-region **RBAC / Managed Identity** failure (role-assignment looping across regions while the MSI existed in only one) and refactored RBAC into a dedicated, **region-pinned** resource — converting a hard failure into a controlled System Skip.
- Designed an **approval-light privileged-action pattern** (ARM grants role → wait → shell extension acts under the deployment identity) using a scoped **User-Assigned Managed Identity** with **User Access Administrator** to assign **Key Vault data-plane RBAC** without manual approvals in restricted clouds.
- Re-pointed certificate workflows to the legacy buildout app via **config-only changes**; implemented **EV2-native Key Vault & certificate validation** standardized across value streams.
- Resolved **cross-tenant service-principal auth** (Corp / Partner / First-Party) via admin-consent provisioning, unblocking Azure DevOps pipeline identities.

Earlier at LTIMindtree, drove enterprise IaC and AI platform delivery (detailed below).

LTIMindtree Limited — Principal Platform Engineer & DevOps (Client: Microsoft)

Dec 2024 – Dec 2025

M365 Service Engineering & AI Transformation

- Architected reusable, **Terraform-driven** Azure platform frameworks delivering **zero-touch deployments** with immutable, declarative provisioning standards.
- Built **declarative YAML CI/CD pipelines** (Azure DevOps) for version-controlled infrastructure and application delivery.
- Designed an **LLM-powered operations chatbot** (GPT-4 on Azure AI Foundry) with **RAG + ChromaDB + LangChain**, automating knowledge retrieval for operations engineers.

LTIMindtree Limited — Senior SRE & Bare-Metal Orchestration Lead (Client: Microsoft)

Jan 2021 – Dec 2024

- Deployed and lifecycle-managed **250+ bare-metal Kubernetes sites** globally (Operators Nexus) with Airship and OpenStack-Helm — automated cert rotation and compliance-driven upgrades.
- Built **Python tooling** generating encrypted site manifests (topology, VLANs, IP ranges, secrets), eliminating manual config error for repeatable, secure site builds.
- Managed **CI/CD (Git, Docker, Jenkins, ECR)** for cluster health, upgrades, and RAID workflows; implemented **Keystone RBAC webhooks** for fine-grained Kubernetes access control.
- Led **SRE for Microsoft MFA** — synthetic monitoring (C# runners), Datadog/Geneva/ThousandEyes dashboards, and Kusto investigations upholding availability **SLAs**.
- Operated under **24/7 rotational on-call** driving incident response, RCA, and reliability improvements.

LTIMindtree Limited — Platform Engineer, DevOps & Undercloud (Intel, AkzoNobel, Amex GBT, Capital One) May 2014 – Dec 2020

- Created **D-Engine**, a proprietary **multi-cloud IaC** abstraction provisioning AWS/Azure resources on demand — standardizing deployments and cutting provisioning time.
- Integrated D-Engine with **Jenkins/Groovy pipelines** for CI/CD across **80+ servers**; automated SSL/TLS and Nginx reverse-proxy for **300+ production sites**.
- Served as **Chef SWAT** consultant — authored cookbooks, Policy Files, Test Kitchen validation; managed AWS (EC2/S3/Route53/ELB/IAM/CloudFormation) as code.
- Led **AWS/Azure cloud migration and disaster-recovery** designs for enterprise clients with Kubernetes-based runtimes.

LTIMindtree — Application Support Engineer (KPN) 2013 – 2014 **Wipro — Application Support Engineer L2** (Capital 2010 – 2013
One)

- 24/7 production support; UC4 SFTP automation and SharePoint administration under **ITIL**.
- L2 support for banking apps (Windows Server, IIS 6.0, AD); SEV2–SEV4 incidents, Control-M, RCA under **ITIL**.

ezrecharge — Full-Stack Developer (Co-founder) 2008 – 2009

- Co-built and launched **ezrecharge.in**, a LAMP-stack online recharge platform with payment-gateway integration and an AJAX no-refresh UI — **still live 17+ years later**.

EDUCATION

Master of Science, Computer Science — University of Madras, 2010 (78%)

Bachelor of Science, Computer Science — Bharathiar University, 2008 (74%)
