Infrastructure as Code

Honors-Awards

Outstanding Performer 2014
Outstanding Performer 2016
Outstanding Performer 2017
Pillar Award 2017

Sriram Rajendran

Associate Principal
Redmond, Washington, United States

Summary

Built and own infrastructure through code, maintain our high-quality code base by performing code reviews, and work closely with development teams to automate CI/CD pipelines to remove repetitive processes and simplify operational need's.

Identify and diagnose deficiencies related to existing frameworks, tools and processes, and recommend creative solutions to reduce waste and continuously improve.

Contribute to the design and implementation of extremely large-scale systems.

Extensive experience in writing cookbooks, playbooks and managing CI & CD pipeline in Chef and Ansible.

Managed large enterprise level application (credit card banking and etc) and supported it 24/7.

Explored various numbers of sub tool mentioned in skills, for example in Chef Eco system have explored In-spec, habitat, compliance and etc

Mentor new team members and help shape the SRE discipline across the enterprise.

Experience

Client Name: Microsoft Corporation

Project Name: Microsoft 365 Service Engineering and WordPress Migration.

Project Role: Computer Systems Engineer/Architect

Designed and developed a scalable, reusable WordPress framework on Microsoft Azure, supporting diverse deployment models with optimal performance and flexibility.

Automated infrastructure deployment using Terraform with declarative, reusable, and immutable scripts for provisioning and managing Azure resources.

Configured multiple Terraform providers — including azurearm, helm, kubernetes, azuread, tls, random, and kubectl — for comprehensive infrastructure, security, and container management.

Implemented a site-level modular Terraform approach to fully automate deployments, decouple configurations, and minimize manual intervention and configuration errors.

Designed and implemented scalable, reliable pipelines as code for infrastructure (Terraform) and application deployments, ensuring modularity, maintainability, and multi-environment support.

Configured CI pipelines to automatically trigger on Terraform commits, enabling validation and deployment of infrastructure changes with consistent code quality.

Integrated automated linting and terraform plan validation to enforce standards, detect issues early, and ensure error-free infrastructure updates.

Stored generated tfplan files in Azure Artifacts for versioned tracking, transparency, and future reference of infrastructure changes.

Created and deployed a chatbot using OpenAI's GPT-4 and Retrieval-Augmented Generation (RAG) within Azure AI Services to deliver intelligent, context-aware user interactions.

Integrated the chatbot with ChromaDB vector database to enable accurate, contextually relevant responses through vector similarity search.

Utilized LangChain to seamlessly connect the chatbot with the LLM and vector database, enabling responses based on both historical and real-time data.

Mindtree

12 years 2 months

Associate Principal

January 2022 - March 2025 (3 years 3 months)

Redmond, Washington, United States

Project: Microsoft (Azure For Operators)

Deploying under cloud platform orchestrated by kubernetes.

Project Lead

February 2020 - January 2022 (2 years)

Redmond, Washington, United States

Project: Microsoft (Azure Identity services)

- Supporting scalable services and distributed systems for MS Azure
- Managing infrastructure behind the application via Ansible
- Performing services deployment and automation
- Providing On-call support for services.

Project Lead

April 2019 - February 2020 (11 months)

Scottsdale, Arizona, United States

Project: Amex GBT

- Infrastructure automation via Ansible (built a framework around it)
- Experience with building a suite of monitoring services.
- Implementation of pro-active solutions and automated build and deployment process (CI and CD)
- Created maintained documentation and troubleshooting runbook.

Project Lead

November 2018 - April 2019 (6 months)

Hillsboro, Oregon, United States

Project: Intel (Individual contributor)

- Benchmarking hardware.
- Created Private Certified Kubernetes Conformance cluster and validated it via Kubetest.
- Build environment from scratch including unboxing server and rack installation.

- Hardware installing of Fortville network driver on Super micro servers to enable 100 Gbps between storage and compute nodes.
- Worked on BMC and Redfish API for server configuration via Ansible to add them in the pool of other server. (Physical Server bootstrapping)

Project Lead

June 2017 - November 2018 (1 year 6 months)

Chennai, Tamil Nadu, India

Project: D-Engine

- Designed the product from the scratch, build the product and implementation of it.
 - o Hiring, building, managing and nurturing team.
- D-Engine is a custom VM Orchestrator, It was created from following
 - o Cloud and Non Cloud SDK's
 - o Custom Knife Plugins Chef or Custom Modules in Ansible
 - o Habitat for Container Orchestration.
- Build with core principles of Infrastructure as code
- Packer was used to speed up the bootstrapping time.
- CI and CD implementation for IaC.

Team Lead

June 2015 - June 2017 (2 years 1 month)

Chennai, Tamil Nadu, India

Project: Azkonobel

- Moving ordinary infrastructure to Digital Infrastructure with help of Chef.
- Complete Infrastructure Automation from Firewall to SSL implementation.
- Chef Family
 - o Chef Test Kitchen
 - o Chef Inspec for infrastructure testing
 - o Chef Policy file to overcome security issue with Chef Legacy.
- CI and CD pipeline for IaC was create and every commit will have a Build and Deployment.
- Complete Harness over Chef Environments for better management of Chef.

Senior Engineer

February 2013 - June 2015 (2 years 5 months)

Chennai, Tamil Nadu, India

Project: KPN

- Responsible multiple applications availability in various platforms from (web sphere to BI)
- Complete responsibility for UC4 application and its delivery from offshore.
- Implementation of deployment for support application.
- Automated many manual task performed by team via shell scripting.
- Automated few deployment steps via shell and python scripting.
- Support Microsoft SharePoint application as a platform for customer.
- Monthly patching of SharePoint application for customer.

Wipro Technologies

Project Engineer

October 2010 - February 2013 (2 years 5 months)

Chennai Area, India

Capital One:

- Production support to online banking and credit card banking, responsible for application uptime and deployment.
- Researched, diagnosed, troubleshoot, and identified solutions to unresolved customer issues escalated by the team.
- Automated Application weekly rolling restart via VBS and HTA (Similar to HTML but for Application that runs on Desktop)
- Completed awareness of Event, Change and Incident managed and ITIL process.

Talence Technologies

Web Developer

January 2009 - January 2010 (1 year 1 month)

Chennai, Tamil Nadu, India

Ezrecharge.in

Intern with immense responsibility to work for a mission, Converting Mobile Recharges into Digital.

HTML, JQuery, PHP, MySQL, Programming, Designing, Problem Solving and Implementing thoughts into application.

Education

Loyola College

Master of Science, Computer Science · (2008 - 2010)

SRKV College

Bachelor of Science; Arts and Science, Computer Science; Kovai

Green valley

M.H.S.S, Chennai; Mathematics and Biology
